

Smappee EV Line

The smartest charging solution
for any situation.

Elegant, intelligent and efficient.

The Smappee EV Line charging stations offer the perfect balance between intelligence and beauty. They are equipped with autonomous overload protection and offer optimised self-consumption. Via the Smappee App and Dashboard, you get detailed insights into the charging process and costs. Now that is really smart charging! Enjoy the sleek design and built-in LED lighting that integrates perfectly into residential and business environments. Define their look and set up any functionality as you wish, such as flexible pricing and payment via QR code or charge card. With the EV Line you are set for the future. Enjoy automatic remote updates and easily expand the charging solutions with the rest of the Smappee ecosystem.

Smart EV charging with dynamic load balancing and self-sufficiency.

Autonomous overload protection.

The current infrastructure often cannot cope with the extra energy demand of electric vehicles. This can lead to tripped circuit breakers. Smappee's autonomous overload protection ensures that vehicles can be charged safely, and the system remains within its power limit. Therefore, there is no need for an expensive extension of the electrical connection.

Optimised self-sufficiency.

Installing a charging station has a major impact on the total energy consumption of a home or business. This makes the use of renewable energy even more important. Therefore, Smappee offers a simple way to maximise the use of renewable energy throughout the day for each charging session. In this way, you optimise your self-sufficiency and save costs.

Easy charging

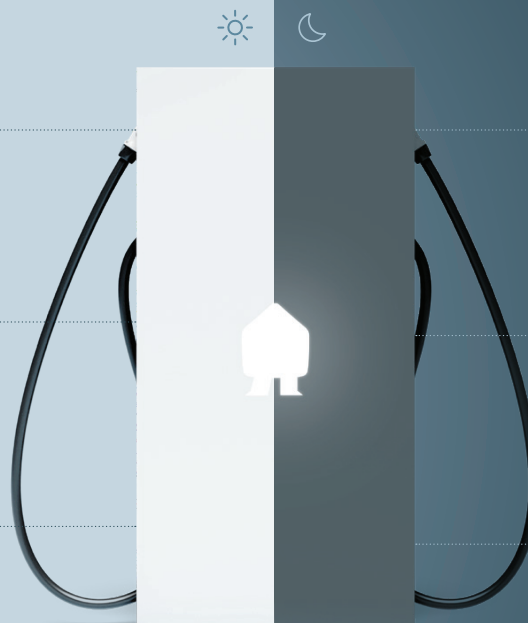

Save time and space in your electric vehicle by opting for integrated charging cables. Fit for any electric vehicle and situation.

Easy installation

Simple cable configuration and installation guide to assist the installer at every step of the installation process.

Future-proof

Thanks to the integrated Smappee Infinity technology, the EV Line receives wireless software updates and is always up to date with new trends and possibilities.

LED lighting

A subtle LED indicates the status. In addition, it ensures sufficient visibility at night for extra safe charging.

Customisable design

Choose the perfect colour for your EV Wall and customise the shape of the LED lighting so that the charging stations fit perfectly into your home or business.

Elegant yet robust design

Beautiful to look at and built to last. Made with durable materials and attention to ease of use.

Complete insight into charging process and costs.

Most electric drivers have to wait for their monthly bill to see how much charging has cost them. By purchasing a Smappee EV Line charging station, you get a real-time overview of the charging process as well as an overview of the charging costs in the Smappee App and Dashboard. In addition, you can also perfectly track the extent to which your charge made use of the solar energy you produced. And that's not all – in combination with the Smappee Infinity energy management technology, you also get instant insight into your entire energy consumption. Where are the energy guzzlers and how self-sufficient are you really? Take immediate action and control the way you use energy via the Smappee App and Dashboard.

Full control for charging square hosts.

Offices, retail and hospitality, as soon as you place multiple charging points on your premises where different users come to charge, you need more control. The Smappee EV Line offers that control... and more. The Smappee Dashboard gives you an overview of all charging points and their revenue and allows you to set tariffs and priority charging.

Three options to start charging easily.

The EV Line offers each user different options for starting the charging process:

- 1. Plug and charge**
Plug in your vehicle and start charging immediately, without identification or payment.
- 2. Scan and charge**
Scan the QR code to start charging and immediately pay for your charging session via the Smappee App.
- 3. Swipe and charge**
Start charging by swiping an RFID token, which may or may not be linked to a credit card. The Smappee EV Line works with the usual charging cards but also with the Smappee Smart Charge Card.

A Smappee solution tailored to everyone.

Smappee offers a charging solution from A to Z and takes care of all aspects related to electric charging. Each company or charging square host can choose which parts of the Smappee offer he/she requires. Our employees and partners are happy to assist you at every step of the process.

Charging solutions

Use the Smappee EV Base for your business and the EV Wall for home. Do you want to charge costs MID-grade, choose EV Base or EV Wall Business.

Smappee CPO Services

The Smappee CPO services take care of the payment and invoicing of the charges at the charging stations of charging station owners. Through the CPO services, users can charge with different charging cards and the charging station owners are periodically compensated for the charges.

Smappee eMSP Services

Thanks to Smappee eMSP services, an electric driver can charge and pay via the Smappee Smart Charge Card at a network of different charging stations. Smappee also handles the reimbursement of the charging station owners via the Smappee or thirdparty CPO. (As of Q3 2021).

High UV
resistance

Water-resistant

Shockproof

Excellent fire
resistance

Low
maintenance

Environmentally
friendly

- The smartest EV charging stations for every home and car park.
- Integrated autonomous overload protection.
- Solution for optimised self-sufficiency.
- Real-time and historic charging insights.
- Priority charging and multiple tariffs.
- Simple payment options with QR code or RFID.
- Elegant design, ambient lighting.
- Easy installation and low maintenance.
- Easily combined with the Smappee Building Energy Management System.
- Available all over Europe.
